Valuing Exploration Assets | SRK Consulting

SRK believes 3D targeting can be successfully applied as an advanced exploration tool when sufficient data are available. The flexibility of this approach allows its application to all deposit styles and geological contexts with a high potential for structurally complex areas.

SRK Kazakhstan > SRK News > Applying the box plot method
Since footwall alteration zones are related to volcanic-hosted

massive sulfide (VMS) deposits, their unique features provide likely targets for exploration. Of these, the chloritic footwall alteration pipe is the most characteristic of VMS deposits.

Mining Structural Geology | SRK Consulting

An appreciation of the geological spatial controls to mineralization is fundamental to mine operation optimization, near-mine exploration, resource estimation, geotechnical engineering, and mineral processing. It enables us to improve near-mine exploration targeting, resource estimation confidence, geotechnical mine design support, short- and long-term mine planning, grade control, mine reconciliation, and—ultimately—profitability.

Evolution of SRK ES | Exploration Geology | SRK Consulting ...

Successful exploration relies on efficiently interpreting geological, geochemical, and geophysical data then applying the results to the generation and testing of exploration targets. Developing programmes to achieve this and mobilizing the required people and equipment in remote areas is challenging and requires significant time, resources, contacts, and technical and regional expertise.

Geological Structural Mapping | Exploration Geology | SRK News

Oliver Bayley, Senior Exploration Geologist SRK realised the full potential of sonic drilling in 2010 when they recommended the technique for an alluvial platinum project that was struggling to reconcile drilling results and mine production.

Mine Grade Control & Reconciliation | SRK Consulting

Mining & Mineral Exploration Consultants | SRK Consulting. We review, assess, design, and implement exploration programmes to answer critical geological questions while adhering to exploration budgetary constraints. Our geologists have expert knowledge of the mechanisms of orebody formation and distribution within a wide range of geological and tectonic settings.

SRK News #47 | SRK Consulting

SRK believes that geological and structural mapping should be conducted early in any project, to form a solid basis for a cost-effective exploration campaign. The cost of initial geological mapping fades into insignificance when compared with

drilling or regional geochemical or geophysical surveys.

Mining & Mineral Exploration Planning Consultants | SRK

An understanding of the structural controls on zones of mineralisation is of fundamental importance for brownfield exploration efforts. The combination of field geology observational skills with new, rapid, computerised modelling tools enhances SRK's ability to provide rapid three-dimensional answers to clients.

Geology | SRK Mining Consultants

Mining Structural Geology | SRK Consulting. Many ore deposits are formed within structurally complex areas. Most mineral deposits are therefore controlled to some extent by geological structures and related hydrothermal alteration. These structures, both large- and small-scale, impact nearly all technical aspects of mineral exploration and mining, including grade control, resource estimation, targeting, rock mass engineering, and hydrogeology.

SRK Exploration Services Ltd (SRK ES) was established in Cardiff in 2003 as a small group of like-minded exploration geologists with a view to filling a perceived gap in the consultancy market. Initially formed as a subsidiary company of SRK Consulting UK, SRK ES achieved full SRK Consulting Practice status in 2008.

Brownfield Targeting | Exploration Geology | SRK News

Mining Geology & Mineral Resources | SRK Consulting. We find, delineate, and estimate the size and quality of mineral deposits using tools that minimize risks, cut costs, and reduce time frames. Base your decisions on our interpretation of the structural setting of ore deposits and our recommendations for specialized drilling, sampling, and assaying techniques.

Geological Foundation | SRK Consulting

SRK was commissioned to review operational aspects of the mine and to provide comments, opinions and recommendations with a focus on geology and resource estimation, grade control and predictability of the plant feed tonnes and gold head grade.

Mathew Davies, Senior Geologist. Exploration valuation is considered somewhat of a dark art. Unlike income or market based valuations, probabilistic based approaches (such as SRK's Exploration Risk, Kilburn, and Bayesian) rely to some degree on subjective interpretation of geological aspects. However, these aspects provide a true geological context for valuation and as such these results can be used beyond simple monetary values.

Excalibur 3D targeting | Exploration Geology | SRK ...

With the challenges of discovering deposits under cover and at depth, exploration success today depends on developing a strong understanding of a target area's geology, structural architecture, geodynamics, and potential deposit preservation from factual observations, rather than relying solely on data and direct detection.

Mining & Mineral Exploration Consultants | SRK Consulting

For many projects in which SRK has been involved, one of the first tasks is to review the geotechnical database proceeding from exploration-stage geotechnical core logging, and check for errors in data collection. Typical errors in core logging relate to the rock quality designation estimation for example.
