What Are Web Services? Easy to Learn Concepts with ...

A distributed application is software that is executed or run on multiple computers within a network. These applications interact in order to achieve a specific goal or task. Traditional applications relied on a single system to run them. Even in the client-server model, the application software had to run on either the client, or the server that the client was accessing.

for reader, with you are hunting the **web services essentials distributed applications with xml rpc soap uddi wsdl** amassing to entry this day, this can be your referred book.
